

MODEL RACING TECHNOLOGY

MRT BUG BOOSTER for use with AMBrc DP PT
Designed for use with Direct Powered Personal Transponders.

***NO MORE missed laps due to weak speedo BEC,
flat batteries, acceleration, servo power drain etc***

*The MRT Bug Booster supplies a boosted 6.3V supply down to a 3.8V input. AMBrc PT operation is maintained down to under 2V and it even works for up to 3 seconds after loss of power!! With a Bug Booster fitted you can be confident your laps will **all** count. Size: 20x15x12mm Weight: approx.7g (cased). 100% waterproof. (Note: lightweight bug boosters in heatshrink are not waterproof)*

Installation instructions:

Connect bug booster between the receiver and PT.

Important: only connect to AMBrc DP transponder.

MRT will not accept responsibility for damage caused by misuse of this product.
MRT can connect Bug Booster direct into transponder, contact MRT for details.
