

# MODEL RACING TECHNOLOGY

**micro-electronic  
discharger and  
pack conditioner**

*for 4 cell 4.8V race packs*

Your new DX4 has been specially developed by MRT to give 4 cell race packs a smooth controlled low current discharge, to keep packs in top condition with maximum performance. Using a DX4 helps maintain the power and run-time of packs, so make sure you always use your DX4 after every run.

The DX4 is a state-of-the-art device, it's simple to use and is fully protected against any possible incorrect connection. To use your DX4 just connect it to a pack, the LED will flash red while the DX4 is active controlling the discharge process. (if the LED does not light the DX4 is connected incorrectly) When the discharge is complete the LED will stop flashing. The pack can then be stored safely in perfect condition.

**BE CAREFUL WHEN DX4 IS ACTIVE AS IT CAN GET VERY HOT!!**
