

MODEL RACING TECHNOLOGY

T1-10 **AMB20 compatible personal transponder**

Your new T1-10 has been designed to ensure total reliability. Please read the instructions to get the most from your T1-10. The T1-10 should not be fitted directly on a graphite chassis as this could reduce the detection range for lap counting. Also the T1-10 MUST be fitted flat to the chassis NOT end on.

When fitted in the car plug the T1-10 into the rx 'Batt' socket. The T1-10 will initialise and display the lap counting number. To change the number press and hold the 'set' button until the number flashes, then press and release to change it. You are now ready to go out on the track and count laps.

Remember to check your number is correct before racing!!!

MRT Part No. R0920 T1-10 (Direct Powered) Specifications:
Input Voltage: 3.5V to 12V. Operating Temp: -10C to +60C.
Fully waterproof (100% humidity). Weight: approx 9 grams.
